

Fenestra

Warmer,
Healthier
Windows
for Life

Transform your home into an oasis with windows and doors that eliminate condensation, reduce noise to a whisper, and provide peace of mind through unmatched strength and rigidity.

Upgrade, future-proof, or build your new home to an exceptional standard with uPVC joinery.

Achieve European levels of comfort all year round with windows and doors designed in Germany and made for New Zealand. The beauty of uPVC goes beyond its ability to minimise heat transfer.

Our windows and doors capable of withstanding the hottest summers, the harshest winters, and any other conditions nature can bring.

With the right joinery, how you live, work, sleep and play in your home become choices no longer bound by the weather. Enjoy the freedom of a warmer, dryer, safer home with Fenestra.

Designed in Germany, for New Zealand Conditions

Windows

New Zealand's unique climate conditions require windows that maximise light while providing superior thermal performance. Frame your view with joinery that blends style with functionality. Explore our most popular window styles.

AWNING

Awning profiles are ideal for climates where rain and wind make opening the windows difficult. Hinged at the top they offer an ideal way to control airflow and ventilate inside no matter the weather.

FRENCH

Like French doors, French windows can add a touch of character and charm to your exterior. These profiles feature two side hung panels of glass that can be opened to create an uninterrupted view.

CASEMENT

Casement windows are hinged at the side and open outward for superior ventilation control. Their strength lies in the simplicity of their design, complementing almost every type of home.

TILT & TURN

Where safety or accessibility are an issue, these profiles can be tilted or fully opened inwards. This is ideal for allowing ventilation to flow or easy cleaning and maintenance from within the home.

Tilted position

Turned position

Doors

SLIDING

A staple of New Zealand homes, sliding doors are ideal for enhancing space and creating seamless connections between the indoors and out. Choose from single sliding, double sliding, 4 panel sliding or 6 panel sliding doors to suit your needs.

FRENCH

Elegant and timeless, French doors bring extra light and the illusion of more space to any room. Ideal for enhancing the character of your home, French doors are a popular choice for conservatories and decks or indoor partitions, from kitchen to dining room for example.

SINGLE

Achieve a coordinated look with uPVC single doors. Designed to keep the heat in, no matter the weather, our single door profiles come in a wide range of designs, allowing you to choose the placement and number of windows on each door.

Choose your glass

Whether you are building a new house, retrofitting a character home, or future-proofing an investment property, the right glass can make your home a more comfortable place to live. Explore a wide range of options including LOW-E performance glass, laminated glass and a range of tinting options.

LOW-E PERFORMANCE
Improve thermal performance

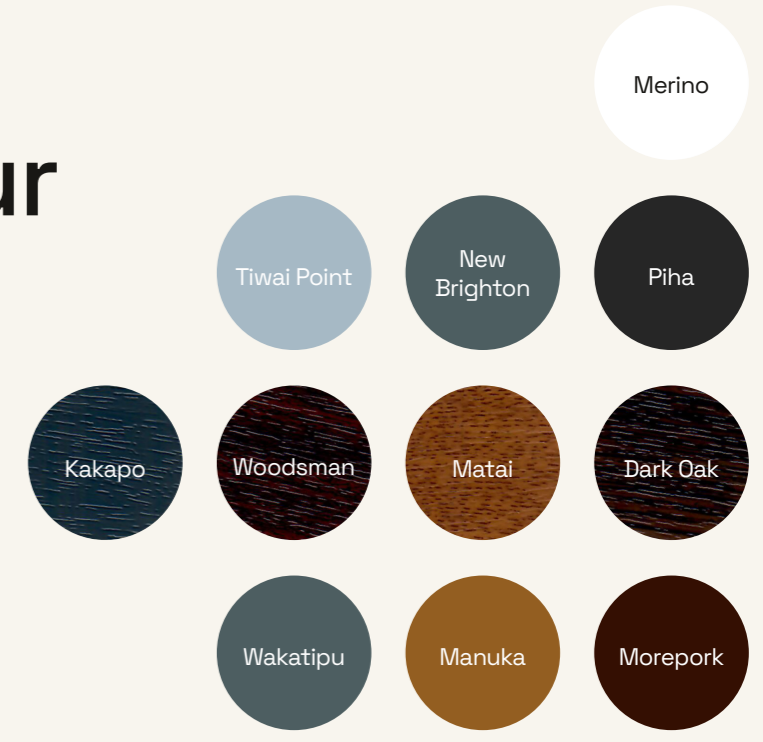

LAMINATED
Create a safer home with glass that won't shatter

TINTING
Enhance the privacy and comfort of your space

Choose your colour

We craft joinery that goes beyond functionality. Our profiles come in a range of colours to elevate the look of any new building or blend harmoniously with your home's character. Go beyond classic white. Explore woodgrain finishes, contemporary metallics and natural hues inspired by nature and perfect for rural, coastal or city landscapes. Achieve your vision without compromise.

Customised to fit

Beyond our popular frame styles, our made to measure service means each frame can be customised to suit the needs of every room. Best of all, no matter the shape or size of your window, every profile is energy efficient. From windows with unique angles and corners to beautifully crafted Bay windows and doors, we bring together the perfect mix of form and function.

Damp, cold, draughty homes are unfortunately all too common in New Zealand. It's time to discover what Europeans have experienced for decades; warm, dry homes and joinery that stands the test of time.

Are you living in a green house?

A GREEN HOME IS EASIER TO ACHIEVE THAN YOU THINK

Aluminium windows and doors, single glazed windows and draughty installations are responsible for a significant proportion of wasted energy in New Zealand. While floor, wall and ceiling insulation help retain heat, a typical home loses around 40% of its heat through windows and doors.

Rising heating costs and an increased awareness around sustainability are leading New Zealanders to futureproof their homes. uPVC windows and doors are the superior solution. The internal-chamber system combined with double or triple glazing reduces heat transfer to almost zero. What's more, uPVC provides insulation far above the New Zealand insulation standards.

Made from high quality material that can be recycled dozens of times, investing in uPVC is a simple way to save money while ensuring your home is warm and dry for decades to come.

LIVE WELL WITH FENESTRA

Fenestra windows and doors are designed to help you live well. Reducing heat loss, draughts and condensation is just the beginning. A warmer, dryer home can save you hundreds of dollars in energy bills each year. With low energy bills comes a smaller carbon footprint and the knowledge you're treading lighter on the earth.

As well as keeping the heat in, energy efficient profiles help keep noise out. Sleep more deeply and work more peacefully with outside sounds reduced to a whisper. uPVC frames are low maintenance and don't require any sanding or painting. A quick wipe down with dishwashing liquid and a cloth is enough to keep your frames looking their best.
